

rickandmortyapi test

Requirements:

1. Get list of characters from <https://rickandmortyapi.com/documentation>
2. Show list of all characters.
3. Implement autocomplete by characters (search by name).
4. Show a list of characters (show fields: name, status). Make the list rendering performance optimization.
5. Open the character's profile page by clicking on a row in the list or by selecting in autocomplete. Show field:
 - a. name
 - b. species
 - c. gender
 - d. location
 - e. episode
 - f. status
 - g. created
6. Push all code to GitHub and send the link.

Good to have:

1. SignIn by facebook or linkedin
2. Make it possible to like/dislike any of the characters.
3. Show the list of liked characters.
4. Make it possible to add a character's photo.

You can store data in localStorage.

Optional:

Use material ui kit.
